

Seattle Coffee Gear is happy to provide an option for recycling used espresso machines and grinders and has developed this program to support the growing demand for this service. This document provides full details on our program, information on how to deliver your machine to us to limit the impact from shipping/deliver and a Release Form.

If you have any questions, please email us at support@seattlecoffeegear.com.

Caffeinatedly Yours,
The Crew @ Seattle Coffee Gear

HOW IT WORKS

We are committed to limiting the quantity of espresso machine or grinder components that end up in the landfill. Once you deliver your machine to us, we will thoroughly assess it to determine if there are any reusable parts and then do our best to recycle any of the components (stainless steel, aluminum, brass, copper and some plastics) that cannot be re-used as parts.

We are continuously investigating new ways to break down, recycle and re-use the materials used in espresso machine and grinder construction, but we are unable to re-use them or recycle them 100%. However, the ultimate contribution to the landfill will be significantly less than what it would be if the machine was thrown away intact.

WHAT YOU NEED TO DO

While much of the machine will likely be recycled, we want to ensure that any reusable components are not damaged during transit. To limit the impact of shipping or delivery, we have a few suggestions on how to prepare your machine.

1. Drain Your Boiler:

Draining your boiler is essential -- freezing and leaking can damage boilers that are shipped or transported with water still in them. For step-by-step instructions on how to perform this on your type of machine, please visit:

<https://www.youtube.com/user/SeattleCoffeeGear/search?query=Drain+Boiler>

If you're not positive which type of machine you have, give us a call and we can help you determine it.

2. Packaging Your Machine for Shipping:

Dropping the machine off at the store? Then you can skip to the Release Form.

If you hung onto the original packaging your machine came in, we're impressed! Most of us have probably kicked those boxes and inserts to the curb, so we thought it would be helpful for our expert shipping manager to

provide tips on how best to package your machine for shipping. You can watch this video to see how Dane packs up machines for shipping without their original packaging:

<http://www.youtube.com/watch?v=jAF6C8pK7Mc>

3. Shipping Tips:

Once you're all packed up and ready to go, please send your machine to us at:

Seattle Coffee Gear

Suite A
Lynnwood, WA, 98036

RELEASE FORM

A signed copy of this release form is required to process your recycled machine. Please include it with your machine when delivering or shipping to us.

Program Purpose

Seattle Coffee Gear offers a recycling program in order to limit the overall quantity of intact espresso machines and grinders that ends up in a landfill. The program was developed in good faith with the express goal of reusing or recycling as much of a machine's components as possible. While we continuously look for new ways to reuse or recycle components, we are unable to commit to 100% machine recyclability.

Property Release

By taking part in Seattle Coffee Gear's Recycle Program, you forfeit any rights to your used machine. Seattle Coffee Gear reserves the right to use this property at its sole discretion and any proceeds generated from this use are the sole property of Seattle Coffee Gear.

I have read and understood the terms outlined above and have the authority to recycle this machine with Seattle Coffee Gear. I will release Seattle Coffee Gear from any and all claims related to the recycle process.
